The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forematics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA biodiversity and for nutritional purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ProserAsnLeuVallysGluGlnArgVallyrGlnGluAlaThrLysGluIleProThr 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated human growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous system disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of a novel nucleic acid that was assembled from human thymus CDNA library-derived Hyseq clone casembled from human thymus CDNA library-derived Hyseq clone identification number 16372272 (see AAH26341). A recursive algorithm was used to extend the clone by pulling additional sequences from different databases. A full-length sequence (see AAH26343) encoding novel human growth regulatory-like polypeptide (GRLP, see AABB2671) was subsequently obtained. Human GRLP belongs to the same protein family as growth regulatory proteins, growth factors, human melanoma derived growth regulatory proteins, growth factors, human melanoma derived growth regulatory proteins, growth factors, human melanoma derived growth regulatory proteins, or melanoma inhibitory activity, cattle cartilage-derived cretinoic acid sensitive protein (CD-RAP, 44% identity and 64% similarity over 126 amino acids) and other retinoic acid-sensitive similarity over 126 amino acids) and polynucleotides of the invention can be used in the prophylaxis, treatment (including gene therapy) and diagnosis of disorders and diseases caused by, or involving, cartilage development and maintenenance, inhibition of melanoma cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cotein, in the generation of antisense, ribozyme and acid molecules, and to produce transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          growth and tumours, including neuroectodermal tumours such as gliomas. The polynuclectides can also be used to design probes and primers, for chromesome and gene mapping, in the recombinant production of protein, in the generation of antisense, ribozyme a

activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAFS9063 to AAFS9099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.

The present sequence is that of a novel nucleic acid encoding human prowth regulatory-like polypeptide (GRLP, see AAB82671).

The sequence was assembled using human thywus CDNA library derived Hyseq clone identification number 16372272 (see AAB6544) as seed, using software programs to pull additional sequences from Hyseq's proprietary database containing expressed sequence tag sequences, and by gel sequencing using primers to extend both 5' and 3' ends. The predicted protein has a mol. wt. of 14 kDa unglycosylated. GRLP belongs to the same protein family as growth regulatory proteins, growth factors, human melanoma derived growth regulatory proteins, crown and a seme protein (GD-RAP), 44% identity or ention acid sensitive protein (GD-RAP), 44% identity and 64% imminatity over 126 amino acids) and other retinoic acid-sensitive similarity over 126 amino acids) and other retinoic acid-sensitive similarity over 126 amino acids) and other retinoic acid-sensitive similarity over 126 amino acids) and other retinoic acid-sensitive carbinacy acid isorders and diseases caused by, or involving, and diagnosis of disorders and diseases caused by, or involving, and diagnosis of disorders and diseases caused by, or involving, and primers, for chromosome and gene mapping, in the recombinant complement, in the generation of antisense, riboxyme and peptide-nucleic acid molecules, and to produce transgenic animals. They may also have cytokine and cell proliferation of protein, in the generation of antisense, riboxyme and peptide-nucleic acid molecules, and to produce transgenic animals. They may also have cytokine and cell proliferation of protein, in the generation of antisense, riboxyme and peptide-nucleic acid molecules, and to produce transgenic animals. They may also have cytokine and cell growth factor activity, chementopolesis regulating activity, itssue growth activity, activity, thementopolesis regulating activity, itssue growth activity, activity, and and attended and activity of an activity of an activity of an activit

The MLP proteins and DNAs have antiinflammatory and cardiant extivities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF5099 and AAB69122 to AAB69122 represent sequences used in the exemplification of the present invention.

```
The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAFS9063 to AAFS9099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA).

as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in Genbank and have know function; 23% have hits in Genbank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           108 t

(MMLYRT) and 5-metnyy durit. The Second Siliand was synthesized with Day Dolymerase and Rhase H. Complementary DNA was blunt ended with Pfu DNA polymerase, ligated with BCOR adapters in the presence of ligate and digeted with ECOR adapters in the presence of ligate fractionated with Xho I. The CDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for CDNAs greater than 400pp and 1000 bp, respectively. The CDNA was then directionally ligated to the UnizAPR XR vector, which had been predigested with Gigapak III Gold and, upon titration on XLI Blue MRF cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's Exhasist Interference resistence helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescue plasmid DNA from the phages. Upon plating of the rescue plasmid DNA from the phages. Upon plating of the rescue plasmid purification kit (Invitrogen, Carlsbad, CA) as instructed by the manufacturer. ESTs from the 5' end of the CDNA clones were generated with the universal MN3 reverse primer (CAGAAAACGTNIGAC) and 25% strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MY Tetrad thermal cyclers (MY Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on My Tetrad thermal cyclers (MY Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). Sequencing reactions were green in Genbank and have know function; 23% have bits in Genbank and have know function; 12% are uncharacterized ESTS and 20% are unidentified.
library construction were carried out with the Uni-Zap XR vector kit (catalog # 237211, Stratagene) and Uni-Zap XR digapack III Gold Cloning kit (catalog # 237612), both from Stratagene (La Jolla, CA, USA) according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo(dT) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker- primer and transcribed using Moloney mutine leukemia virus reverse transcribtase (MMLV-RT) and 5-methyl dCTP. The second strand was

Complementary DNA was blunt ended with Pfu DNA polymerase and digasted with EcoR I adapters in the presence of ligase and digasted vith Xho I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontecch Chroma Spin-1000 (Clontech, Palo Alto, CA) and clontecch Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNAs greater than 400bp and 1000 by recombinants Stratagenes as Stratagenes and Statagenes and Sastagenes and Algases and Algases and Algases and Algases and Algases and Algases and A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      recombnants. Stratagene's Extension recistence resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concert96 (TM) plasmid purification kit (Invitrogen, Cancert96 (TM) as instructed by the manufacturer. EST9 from the 5' end of the CDNA clones were generated with the universal M13 reverse primer (CAGGAAACAGCTRAGACC) and 25% strength BigDye terminator sequencing chemistry (Applied Biosystems, Poster City, CA). Sequencing reactions were performed on M7 Terrad thermal cyclers (M7 Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2: 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function, 23% have bits in GenBank, but do not have assigned function; 12% are uncharacterized ESTS and 20% are unidentified."
